

DAVID KNIGHT

(Phillips 2003)

Now working at Immunocore, one of the world's leading biotechnology companies. David studied Chemistry, Biology and Geography at A Level.

"My three A Level subjects complemented each other very well and I was lucky to have some excellent teachers, Dr Smith, Mr Sturgeon and Miss Southall to name a few."

"My A Levels allowed me to go to Bath University and study Biochemistry, this was a full and varied degree building on the foundations laid down at Aylesbury Grammar School. My degree provided me with the opportunity to work in research laboratories in American universities during 2005 and 2006. During my time in the States I was also given the opportunity to have my work published. From that moment on I knew I wanted to do research full time."

Following completion of his degree David worked at a mid-sized Pharmaceutical company in Slough for 7 years on antibody based therapeutics. He is currently enjoying new challenges working for a rapidly expanding Biotech company in Oxfordshire.

"At AGS I loved Science – my education in the Science block started me on a career in Science which I enjoy today."
