

# DOMINIC VELLA

(Phillips 1999)

Now Associate Professor in Applied Mathematics at Oxford University, Dominic studied Maths, Further Maths, and Physics at A level.

*“After completing my A levels I went on to read Maths at Trinity College, Cambridge.”*

Following his Maths degree Dominic spent a year at Harvard studying Applied Mathematics and then returned to Cambridge to complete a PhD in Applied Mathematics.

*“I spent a decade studying and working in Cambridge, with short periods at Harvard and in Paris. I moved to Oxford in 2011 to take up my current position of Associate Professor.”*

*“I was incredibly lucky to have a number of very supportive and inspiring teachers at AGS in several subjects, but especially in Science and Maths. Looking back, what I think was really special about the staff at AGS, and was extremely important for me developing my own career, was that so many teachers had some experience of research. I think this both enriched their teaching and gave the boys a role model for what a scientist is and how they think about the world. This was true of many of the teachers there, but I especially remember being inspired in this way by Mr McIntosh and Dr Blyth in Physics, Dr Grayson in Maths and Mr Green in Biology”*
