

# KEVIN SMITH

(Phillips 1969)

Now a Management Consultant in Fashion Consumer products, Kevin studied Physics and Chemistry with Double Maths at A level before studying General Engineering at the University of Cambridge

*“I was always motivated to solve problems by ‘the appliance of science’. My choice of A levels gave me a framework and approach to review and analyse any situation or challenge based on facts rather than pure opinions. That has always helped me in my career”*

*“After my first degree, I added a year for a post graduate experience course on Production Methods and Management and that gave me a hard practical perspective on what matters in business”*

Kevin has worked in multiple functions in the Fashion Consumer Products and Retail sectors from helping companies to improve their business processes from product development to serving consumers effectively in stores and on-line.

*“Developing best practice in product development – Enabling Sports and Outdoor Brands to develop the very best products with leading technologies and have them ready for market on controlled but accelerated timelines – better, faster and more reliably than the competition”*

*“Designing and implementing the Logistics infrastructure for a branded products group – where to build the distribution centres, how much stock to keep, the delivery standards to offer and any added services. In its way, no less challenging than space travel.”*

*“Pure science is fascinating. Applying it to real products, processes and business challenges brings it to life. Analysis and hard statistics now support all decisions in all business. Science at AGS gives you an essential foundation for success.”*
